We guarantee our chicks to reach you 100% alive and in good, sturdy condition. We will replace any loss promptly with chicks or cash. Please let us know within 24 hours if any chicks are lost or injured in transit.

We guarantee unqualifiedly that all Eagle Nest Chicks are hatched from parent stock which have been tested and passed successfully the test for Pullorum Disease (B.W.D.) by the Stained Antigen Method. This is our ninth consecutive year of Bloodtesting.

We guarantee that none of Eagle Nest Chicks are hatched in incubators where eggs from non-tested stock are hatched.

We guarantee that we hatch eggs from our own Eagle Nest Matings only, and do not purchase eggs from matings outside our organization.

We guarantee that all chicks are from Matings consisting of choice Birds which have been carefully selected and Legbanded for vigorous Health, good Body Weight, standard qualities and Egg Production characteristics.

We guarantee that all chicks are from the Matings exactly as described in our catalog. And that you will receive the grade chick you order or better from Eagle Nest hatchery.

EAGLE NEST HATCHERY

Per Earl Little

The Long Established Policy of Eagle Nest Hatchery

It is our aim to satisfy you. No guarantee can possibly cover every condition, but we have always kept faith with our customers and we have always tried to be fair and honest in all of our dealings. Eagle Nest Hatchery is one of the oldest established Hatcheries in the United States. As a family, we have been in the Poultry business as Poultrymen and Hatcherymen for more than 50 years. During this time, we have built up a quality Baby Chick business with nearly 2000 steadfast customers. A large number of our customers have been with us for fifteen years and more and among them the high quality of Eagle Nest Chicks and our strictly honest dealings are well known.

It has always been our policy to produce truly good Chicks with genuine Breeding and Health quality back of them. We have never believed in making sensational claims, but have always preferred to tell you, who are our customers, exactly what we have and the selective breeding which is responsible for this quality.

In calling your attention to our guarantee, may we add that if at any time any of our customers have any cause for dissatisfaction with our Chicks, we want them to write us promptly. Likewise, we always appreciate hearing from all of our customers. And we truly appreciate the many fine recommendations of Eagle Nest Chicks made by our customers to their friends.

EAGLE NEST SPECIAL "AA" MATINGS

Many of the Birds in these matings (both Males and Females) are stock direct from our selected "AAA" Matings and are 200 to 288 Egg Pedigreed and R.O.P. Sired, or from improvement stock direct from recognized Production Strains. They have 50% or more of the bloodlines of Trapnest Strains which have made high Records in National Egg Laying Contests.

In addition to their Trapnest Bloodlines, the Birds in our extra special "AA" Matings have exceptionally good standard quality and Body Type. We have carefully selected the best Males from thousands and each one is an outstanding Vigorous Bird in appearance with well developed breasts, broad backs and sturdy legs. You will obtain a flock of very nice, rugged pullets from Eagle Nest extra special "AA" Chicks and they have the breeding and vigor to give you high Flock Average in Egg Production.

OUR CUSTOMERS ARE OUR BEST SALESMEN

Eagle Nest Hatchery Co.
Upper Sandusky, Ohio
Attention: Mr. Earl Little

Dear Sir:

Out of the first flock of 1200 Special Mating chickens, I sold the roosters at 8 weeks old and they run 1 1/4 lbs. each and the cost of this flock—from the time I got them, up to 8 weeks old, that is, when the roosters were sold—the feed bill was \$100.00. The egg production for this flock of pullets for the month of August was 1100 eggs.

September 3,472, and the first half of October 2,468. Number of pullets in this flock 495.

About the second flock—500 Select Mating chicks will say, I just housed them up. Out of this flock, I put in 242 pullets. The roosters in this flock were sold at 7 weeks and they run a little better than 1 lb. I lost about 8 in this flock the first two weeks.

I like both flocks of chicks, but I like the second flock the best and I think it pays to get the best. I had a few roosters left over out of this flock and I killed one and it weighed 5 1/4 lbs. at 4 1/2 months.

I have read your Quarterly and think there is good advice in it. I have found some things in it that I have been practicing myself.

If there is anything else you wish to know regarding the chickens, please let me know.

Yours respectfully,

Howard Boykin

Dear Sirs:

Tenn., Nov. 8, 1935

I am writing you a few lines in regard to my chicks. I received them March 29, 1935—300 of them and I raised 280 until sorting time and there were around 150 roosters which I sold at 8 weeks old; they weighed 2 lbs. apiece. I now have 120 pullets—the best in the country anywhere. Everyone that sees them says so too.

I would not buy chicks anywhere only at Eagle Nest, for I have tried several other places and have not found any as good. They are laying 80% now; the first eggs I got was Sept. 8th and they increased rapidly. I have no feed record but the cocks—they more than paid the feed bill. Am going to commence New Year's Day and keep egg record and will send it in next summer. Am proud of my pullets. I call them my pretty pullets.

Enclosed you will find several snapshots of myself and chicks.

Mattie McKee

Just want to repeat that your chicks do grow fast, and they make nice big hens. Our pullets, which are large bodied, weighing on an average 4 1/2 lbs., began laying when they were five months old. They laid good all winter and last spring. Both the pullets and the old hens, numbering 450, we averaged around 150 dozen, when they were laying the heaviest in April and May. They continued to produce good and some of the hens have not shed their feathers. Some of the yearlings that shed sometime ago are beginning to lay again. We always get nice large eggs, as we do not believe in rushing the hens, when they first commence to lay.

Thank you for the "Eagle Nest News". I shall keep them for future use.

Yours truly,

Carl H. Johnson

The Eagle Nest Hatchery Co.
Upper Sandusky, Ohio

Dear Sirs:

I'm sending pictures as I promised you and trust you'll like them for I'm very much pleased with birds, and am only sorry I couldn't get more of the White Rocks in this picture as they are beautiful.

Yours truly,

Mrs. George Scroger

Eagle Nest Hatchery
Upper Sandusky, Ohio

Dear Sir:

We have been trying to raise chickens for the last ten years without success until this year we sent for Eagle Nest Chicks. We raised nearly every chick and they started to lay at the age of four and one-half months.

Now we are looking forward to buying our chicks at a reliable place, The Eagle Nest Hatchery.

Enclosed find picture of some of the chickens.

R. D. Box No. 26 Mrs. Windom Craze

Paximos, Pa.

Eagle Nest Hatchery Co.
Upper Sandusky, Ohio

Dear Sir:

Eagle Nest Chicks are improving as years go by.

Have had chicks most every year for the last ten years, and surely would not have ordered each year if they were not good. Not only that but I notice each year they seem to improve as to stronger hens, and larger eggs.

The chicks I received two years ago are now my old hens, and how they have layed. The eggs will average 28 oz. to the dozen. They are laying at present 50%, and everyone speaks of the large size of the hens.

The 300 chicks I received this year on April 5th were a fine lot of chicks. I have lost just 20 all in the first six weeks.

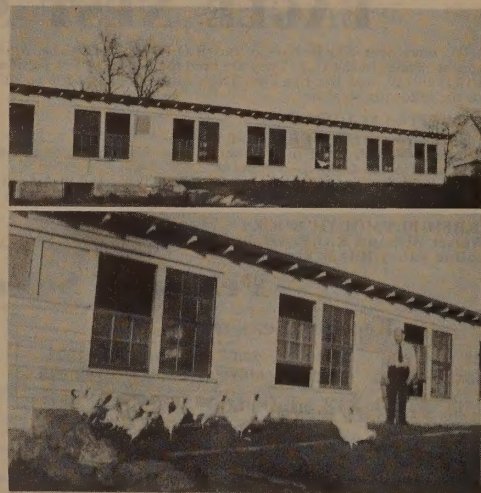

The cockerels average 2 lbs. at 10 weeks and were all sold at the door. To me the Pullets were the nicest looking ones around here, and on the 10th of August I got the first egg. On Sept. 5th there were 135 pullets put in the laying coop. They average over 4 lbs. and some went as high as 5 lbs.

The egg production increased as the days went by. Sept. 10th they were laying 20%, Oct. 1st, 50% and tonight we gathered 103 eggs, which is a lot of eggs and about all went in the medium and large class eggs.

I can't say anything more than that I am very well pleased with them.

Am sending pictures of the coop; one of myself and a part of the pullets that I could get out of the coop through the window. The pullets do not have a yard after they go in the laying house. Sincerely hope you will accept this as a good report of Eagle Nest chicks.

▼ Floyd M. Green, R.F.D. No. 7

Eagle Nest Hatchery & Breeding Farm
Upper Sandusky, Ohio

New York
Nov. 7, 1935

Dear Sirs:

Our chicks were received at the Jamestown express office the same morning that you sent them and we had them in the brooder house about twelve o'clock. They surely were a fine bunch of chicks. Not a dead one in the bunch and as lively as could be.

They certainly grew fast this year, and the few New Hampshire Reds we ordered matured as fast as the White Leghorns and began laying about the same time. We sold the roosters at the broiler age; at ten weeks they weighed about 2 1/2 lbs. and were as plump as could be.

Just want to repeat that your chicks do grow fast, and they make nice big hens. Our pullets, which are large bodied, weighing on an average 4 1/2 lbs., began laying when they were five months old. They laid good all winter and last spring. Both the pullets and the old hens, numbering 450, we averaged around 150 dozen, when they were laying the heaviest in April and May. They continued to produce good and some of the hens have not shed their feathers. Some of the yearlings that shed sometime ago are beginning to lay again. We always get nice large eggs, as we do not believe in rushing the hens, when they first commence to lay.

Thank you for the "Eagle Nest News". I shall keep them for future use.

Yours truly,

Carl H. Johnson

The Eagle Nest Hatchery - - - Upper Sandusky, Ohio

breeding which is responsible for this quality

EAGLE NEST HATCHERY

is Owned and Managed by

EXPERIENCED POULTRY BREEDERS

Fifty-two years ago, H. C. Little the founder of Eagle Nest Hatchery, started in the Poultry Business. Years before the Baby Chick business started, he had learned how to develop an exceptionally vigorous Strain by carefully checking the livability of the offspring from each Mating. He called it good breeding and held that vigorous Livability and long life were absolutely necessary in breeding Poultry for either Egg Production or Exhibition.

Today, this method of Breeding is known as Progeny-Testing for High Livability.

We, the present owners of Eagle Nest Hatchery are experienced Poultry Breeders. We were raised in the Poultry Business and we specialize in producing Baby Chicks of genuine quality with from five to twenty generations of the finest Trapnest-Pedigree Bloodlines back of them.

We have developed a Breeding Program which is in continuous use in improving our Matings and which is now recognized by the U. S. Department of Agriculture as one of the soundest Programs for the real improvement of Baby Chicks for Commercial purposes.

But Breeding Improvement is only one of the steps in our complete Program. We Pullorum Test all of our stock for B.W.D., each year, by the Stained Antigen Method. We select our Breeding Stock for Rugged Vigor, Big Bone and Large Body Weight. We have made a careful study of Incubation and have long years of practical experience with every method of Incubation. We use the greatest care in mating up the stock which produces our Eggs for Hatching.

All of this detailed work is carried on conscientiously the year around. Producing chicks of High quality is a job to which we devote all of our time and effort.

Eagle Nest Hatchery is one of the oldest, established Hatcheries in the U. S.

We have the training, organization, experience and prompt efficient methods of dealing to serve you and satisfy you.

We are very glad to present you with this catalog. We hope you will find every page interesting and instructive. We believe you will agree that we are doing our work well.

If you have never raised Eagle Nest Chicks before, we cordially invite you to give them a fair trial this season. We are sure you will be pleased with their quality and our service.

To our old customers; we are glad to greet you again through the pages of this new catalog which is the most complete catalog we have ever printed.

Sincerely yours,

Earl Little

A MODERN HATCHERY BUILDING

ALL EAGLE NEST Chicks are hatched in the modern up-to-date building shown above which was especially designed and constructed to fit our needs in producing Baby Chicks. *Every day during the hatching season the building is cleaned and disinfected to insure sanitation.*

Our offices are located in the front part of the building. The second floor of this building is used for storage and an entire year's supply of hatchery and poultry supplies are kept in stock at all times.

The room where Eagle Nest Chicks are hatched is a separate room. Every convenience is at hand for the most practical and scientific management. All chicks are removed from the incubator after hatching and hardened off in a special room which is kept at exactly

the right temperature. Then we carefully select them for shipment to our customers. This is a very important point in the quality of Eagle Nest Hatchery Chicks, because chicks can be selected much more efficiently than they can in the incubator trays. Through years of experience we know that strong chicks which have been hardened off can be selected only after they have been hardened off. This precaution is one of the reasons why you have obtained 100% strong, vigorous chicks from Eagle Nest Hatchery.

Still another room in the hatchery building is the shipping room. All chicks are put into a heated truck inside of the hatchery building and taken right on the proper train for shipment to you in the shortest possible time. Thus, all Eagle Nest Chicks are started on their journey to you under best possible conditions.

Eagle Nest Chicks Are Hatched in Up-to-Date Incubators by Experienced Operators

All eggs which produce Eagle Nest Chicks are carefully selected for Size, Shell Texture, Shape, and Color. As we hatch twice a week all eggs are set within a short time after they are laid. We are especially careful to select eggs of large size. We never set a small egg. All eggs set average above 24 ounces per dozen. This weight is carefully checked by repeated weighings of the trays on the scale. We do not guess in any step in our work in producing chicks.

We hatch Eagle Nest Baby Chicks in Smith Electric Incubators. Our incubators are kept up-to-date by service men direct from the Smith factory. They inspect

our incubators periodically. The temperature, moisture, and the ventilation are automatically controlled. In addition, we inspect our incubators every hour during the day and night to be sure that everything is operating correctly. After each hatch, we thoroughly disinfect the incubators by gas treatment. This treatment penetrates every nook and corner of the incubator and does a biologically clean job of disinfecting. The floors of all incubators are disinfected daily. Likewise, the floor of our hatching room.

The incubators are kept in a separate incubator room in our hatchery building and every facility for efficient hatching is available.

Large eggs only are used to produce Eagle Nest Baby Chicks. Each egg is selected for shell texture, shape and shell color. Our eggs for setting average 25½ ounces per dozen by actual weight on the scale.

THE ENTIRE EAGLE NEST ORGANIZATION Hatchery—Office—Personnel—Coordinated for GIVING YOU QUALITY CHICKS

Office of Eagle Nest Hatchery

The photo at the right shows the interior of the office at Eagle Nest Hatchery. At the time this photo was taken we were busy sending Eagle Nest Hatchery News Bulletins to our customers. When you write a letter to the Eagle Nest Hatchery, it is promptly answered and personally dictated in this office. In connection with the office, we have one of the largest and most complete libraries of poultry books in the U. S. Poultry books written many years ago and the very latest books published are on file and available for reference. We also, have copies of Bulletins from state colleges all over the U. S. on every type of poultry problem.

Records

The complete records on the Breeding of all of our matings and our Improvement Work, Pullorum Testing are on file in this office. There is nothing left to guess work in the continuous Improvement of Eagle Nest Matings.

Complete information on Bloodlines of all of Eagle Nest Chicks are available for years back. We can supply you with unrelated stock at any time upon your request.

Business-Like Methods

While we believe that the actual quality of the chicks themselves is the most important consideration in the success of our customers—we also believe that business-like methods in all of our dealings are important. And because we believe this, we have an efficient office force and complete modern equipment for prompt attention to the correspondence and purchases of our customers. Eagle Nest Hatchery is one of the oldest hatcheries in the U. S. We have the experience, the organization and the training to serve you in the way you like to be served. We have built our hatchery on honest Quality and honest Prices. In purchasing your chicks from Eagle Nest Hatchery you are dealing with a financially responsible hatchery.

Eagle Nest Chicks are carefully selected after they have been properly "hardened off." Each chick is individually handled to be sure that it is "Clean Hatched" and has bright, rich color pigment in its legs and beak.

Chicks Hardened Before Selection

As soon as the hatch is over the chicks are removed from the incubator trays and placed in a special room for hardening. Newly hatched baby chicks in warm incubators appear pretty much alike. It is very difficult to pick out any imperfect ones. However, when removed from the incubators and placed in a room of brooding temperature, the strong chicks stand up and are active. It is then very easy to do an efficient job of selecting. As soon as this selection is completed we inspect each chick individually to be sure that it is "clean hatched" and has rich color pigment in its legs and beak. We send out only A-1 stock with good vitality and strong vigorous appearance.

EAGLE NEST SERVICE TO YOU

Does Not End When You Buy Your Chicks

As a poultry raiser you receive all the benefits of our breeding and health improvement program in Eagle Nest Chicks for a very small fraction of what it would cost you to produce chicks of equally good quality for yourself. This is true because genuine breeding improvement work is expensive and requires conscientious year 'round effort. But by spreading our costs over thousands of Eagle Nest Chicks during a long hatching season—the actual cost to you per chick is very small. Thus, you can obtain 200 to 307 egg Sired Chicks from our Selected Mating at less cost than we paid for Pedigreed Males to improve them.

Eagle Nest Wants to Know Your Poultry Problems

We are always glad to hear from you in regard to your poultry problems. Do not hesitate to write us your plans in detail. We will be glad to answer any questions in regard to poultry management you may care to submit to us during the year. Back of Eagle Nest Hatchery are fifty-two years of Poultry Breeding and Hatching Experience. And you will find that our suggestions on any poultry problem are practical and right to the point.

We do not discuss poultry problems from the theoretical standpoint. We are constantly studying every phase of the poultry industry. As a practical poultry raiser we know that you want practical information and we base all of our replies on our own practical experience.

Eagle Nest Gives Your Order Prompt and Efficient Attention

When you send your order to Eagle Nest Hatchery for chicks we acknowledge it immediately and verify the date of shipment. We hatch a large number of chicks and in nearly all cases we can guarantee shipment of your order on the exact date you want. Please send your order as far in advance as possible as we can guarantee shipment on advance orders at all times. And by knowing your requirements in advance we can give you the best service.

We send you notice of when we expect to ship your chicks. This notice should be kept as a reminder to you to start your brooder stove and to get things in complete readiness to receive the chicks.

Eagle Nest Gives You Brooding Instructions

In purchasing your chicks from Eagle Nest Hatchery we send you complete instructions on the best methods of brooding. We do not claim that our methods are the only successful methods but we do say that unless you have a very successful program of your own that it will be better to follow the program outlined in the Eagle Nest Hatchery News. As a customer, you will receive a copy of this Bulletin free of charge. Our News Bulletin is a year 'round service. Each spring we send all customers a copy of our Brooding Bulletin. Later on in the season we send complete instructions for growing young stock on the range. Still later in the summer we send our customers instructions on handling the pullets and housing them. This bulletin describes very carefully the exact methods which we use in selecting stock for high average Egg Production. In the fall issue of Eagle Nest Hatchery News, we describe the various methods for managing the layers to obtain the highest Egg Production. The information in this Bulletin alone will help you to realize many extra dollars of profit from your old hens. That is to say, if you will put your old hens under lights starting August 15th and manage them exactly as we describe, you will keep them producing at 50% or better until late in November. This means that you will get increased Egg Production of nice large hen eggs at the time when eggs are very scarce and high in price.

Eagle Nest Hatching News is published four times a year and each issue contains all of the latest information on Poultry Raising which is of practical use to the practical Poultry Raiser. Each issue of this Bulletin is sent free of charge to our customers.

EAGLE NEST

Bloodtesting

ALL EAGLE NEST BREEDING STOCK PULLORUM TESTED for B.W.D. for Nine Years

For nine consecutive years Eagle Nest Breeding Stock has been Pullorum tested for B.W.D. by the Stained Antigen Method. This work is done by trained and experienced operators who test more than sixty thousand birds each season. All doubtful birds are removed promptly. Under no circumstances, do we retain any doubtful birds for retesting at a later date in hopes that they will pass successfully. And because we have been very rigid in our requirements on Bloodtesting for years, we have some of the cleanest matings in the country to produce Eagle Nest Baby Chicks for you.

In selecting stock for our breeding improvement program we selected Strains which have been Pullorum clean and 100% free from reactors by Official Tests. Very few hatcheries in the country have tested as long as *Eagle Nest*. And only a few of the better class breeders have tested as long. In work of this kind which promotes the health of our breeding stock in any way, we have always been one of the first in the field to try new methods and test out their efficiency. As soon as we have tested any new method and found it worthwhile, we incorporate it as part of our program for all of our matings. One of the reasons why we were among the first to recognize the value of B.W.D. tests.

Pullorum Testing young R.O.P. Pedigreed Cockerels for B.W.D. All improvement stock is tested upon arrival to be sure that it is clean. Close-up shows expert taking blood samples from Select Mating Hen.

EAGLE NEST SELECTIVE BREEDING COUNTS BIG IN IMPROVEMENT QUALITY

Many of the well-known Trapnested Strains cannot meet Eagle Nest requirements for improvement quality. This is true because we demand well balanced breeding in Improvement Stock which is correctly bred for High Family Averages in Livability, in Egg Production, in Egg Size and in Body Weight.

We pay no attention to the highly advertised 300 Egg Hen. But we do pay considerable attention to the average production of the family from which she came because Pullets will lay according to the average of their female ancestors—not according to the record of the

highest Egg Producer in the Family. Therefore, the family average in all characteristics soon proves to us whether or not a strain has the ability to reproduce high averages in its offspring. We know from a profitable standpoint that a Flock which averages to lay 180 to 200 Eggs per year is a very profitable Flock. This high average is attainable by good Breeding and proper care.

As a Poultry Breeder, one of the most important benefits you receive in Eagle Nest Baby Chicks is our knowledge and careful selection of the Trapnested Strains used to improve the Breeding of Eagle Nest Chicks.

ENTER THE 1936 BABY CHICK CONTEST \$2,000 in Cash Prizes

We support the Chick Growing Contests conducted by American Poultry Journal and Poultry Tribune because we believe that they encourage better standards for breeding chicks. The name of every customer of Eagle Nest is entered in both of these Chick Growing Contests free of charge. And we offer \$5.00 for every prize winning letter written by one of our customers. In other words if you win a prize in either one of these contests, send your winning letter to us and we will remit promptly with a \$5.00 check to you.

You do not have to be an experienced writer to win in these contests. The majority of prize winners in the past have never written for publication before. The important thing is to get good Chicks, good care and keep a careful record of your results. If you do this you have just as much opportunity to win as any of our other customers. We will do our part by winning you the highest quality in rugged, healthy Baby Chicks.

EAGLE NEST

Breeding Program

PUTS REAL BREEDING QUALITIES IN ALL EAGLE NEST CHICKS

In order to select truly good Strains for the breeding improvement, a hatcheryman must know by actual Poultry Breeding experience exactly how to determine the best quality of Trapnest-Pedigreed Strains. Some poultry breeders breed only from high egg record stock and pay little attention to body size, sturdy bone, and livability. Other breeders Progeny-Test and Family-Test their breeding stock so as to produce offspring with high average in all characteristics.

There is a wide difference between these two types of Strains. And it will interest you to know that in all Eagle Nest improvement breeding comes only from those Strains which are bred by the Progeny Test and Family Test method.

The object of Family Test is to find out the average egg production of all the female ancestry and all of the full sisters. The reason why this knowledge is so important is that pullets will

average to produce results in egg production and livability which very closely approximates the average of the family from which they come. Thus, a family of full sisters with an average egg record of 230 eggs and 95% livability is of far greater worth for breeding purposes than a 300 egg hen which comes from a low-producing family. We select our improvement stock from strains of high producing families paying special attention to the size of the eggs produced by the strain.

But we do not stop at this point. We, also, select our improvement stock from Strains which are bred by the Progeny Test method. A hen must come from a family of sisters with high average records. In addition, she must have the ability to produce daughters with high average records. Then she becomes exceptionally valuable as a breeder of Known Quality, and *her male offspring will produce very rapid improvement in high average egg production and high livability.*

Testing the Strains by Practical Experience

After selecting Trapnest-Pedigreed Strain with which to improve Eagle Nest Matings, we test out stock of this Strain to make sure that it has all of the qualities that we want. We find that this precaution has been well worthwhile because it enables us to learn the exact

degree of improvement which we can put into Eagle Nest Chicks in all desirable characteristics. With this program of selecting stock of truly superior breeding, we have improved the quality of Eagle Nest for a long period of years.

Photo below shows an ideal range for growing stock. This range has trees for shade and thick grass sod to prevent contamination. It also has a good gravel soil and rain drains off the range because of its slope

EAGLE NEST IS EXTREMELY CAREFUL in the Selection of Their Males

Read What the U. S. Dept. of Agriculture Says

Nearly all of our first class poultry breeders know that progeny testing is the only sure way of measuring a sire's or a dams true transmitting power. Of all methods yet determined this one produces the desired results faster and surer than any other.

Progeny testing, however, in order to be most effective must be used in connection with a sound breeding program. Such a program must not only keep the better families going, but, in addition, should enable the breeder to disseminate the influence of such superior families throughout the entire flock.

The male is very important in any breeding program, and around him should be built the foundation for future progress. His importance should not be overlooked. It is, therefore, imperative that breeders and hatcherymen use the males that head their flocks to the best advantage, and this means to use them in a definite breeding program.

There are three major reasons why the male is the most important part of any breeding operation. First, the male is more important than the female due to the difference in numbers between the males and females used in matings. For instance, in single matings where one male is mated to 16 females, each female producing an average of 20 chicks during the hatching season, making a total of 320 chicks, the male contributes 50% of the breeding influence to all these chicks, whereas each female contributes only 6¼% of the total.

Reprinted from THE AMERICAN POULTRY JOURNAL December Issue

SELECTION OF OUR MALES

Under no circumstances do we put a male in any mating unless we have decided that he can be expected to produce improvement in the offspring. Nor, under any consideration do we use any male, regardless of breed or pedigree that does not show proper vigor, health and standard breed qualifications. Compare this method with the usual practice of putting just so many males with so many females in order to get fertile eggs.

EGG PRODUCTION GOES UP WITH INCREASED YEARS OF EGG BREEDING

Eagle Nest has used Pedigreed Males for a long period of consecutive years. The Chart at the right shows how egg production is increased thru use of Males with Pedigreed Breeding. Note how Pedigreed Cockerels mated with a Mongrel hen has in three years of egg breeding almost tripled the egg production. From which mating would you rather have your chicks — the second or fourth? The fourth of course—Therefore buy Eagle Nest chicks where you are sure every chick has several years of egg breeding behind them to give you maximum egg production.

EAGLE NEST SELECTS EVERY HEN for Outstanding Egg Production Characteristics

Through long experience in Selecting Hens for Egg Production characteristics, we can divide any group of Hens into the poor producers and the best producers. This step in our selective Breeding Program is comparatively easy, and it has been proven time and again that our selections in this respect are very accurate. Thus, the group of Hens which we select as high producers invariably prove to be the best layers.

But this is only the preliminary step to individual selection. Every Hen in every Eagle Nest Mating is individually handled for strong egg production characteristics. We select Hens with deep long bodies and well sprung ribs which denote big capacity for handling food and producing eggs. It has been found that small hens invariably are producers of undersized eggs therefore careful attention is given to the size of both males and females

Careful attention is given to head points of every Eagle Nest Breeding Female. She must have a well developed comb and wattles. Her head must be broad with a large full eye and full face. She must have a good balance in all of her head features and show by her physical appearance that she has outstanding vigor.

Selective Breeding, as you may know, can be done haphazardly or it can be done carefully by a trained Poultryman who knows exactly what he is doing. May we assure you that all of Eagle Nest Breeding Stock is selected carefully by the highest standards?

EVERY EAGLE NEST BREEDER, BOTH MALE AND FEMALE, IS CAREFULLY SELECTED FOR GOOD BODY WEIGHT

The average weight in all our breeding stock is standard weight or above. In Leghorns the body weights run considerably above the standard requirements. In other breeds the standard weights are about right and we breed in accordance with standard requirements.

In all Breeding stock we like to see good big shanks since they are usually

indications of vigorous growth and good health.

We have given careful attention for years to the selection of all stock for good type and color.

We do not make plumage color a fad however because most of these fads produce slow feathering and narrow feathers both of which are associated with poor vigor.

EAGLE NEST SELECTS THEIR EGGS WITH UTMOST CARE

The profit from eggs assumes a place of considerable importance in the poultry business. This profit is obtainable only as long as the size and number of eggs produced are of the kind that provide themselves a ready market.

Every egg of the hundreds of thousands that we handle is graded for size, weight, shape and color. No egg is used for hatching that should not average 24 ounces or more to the dozen.

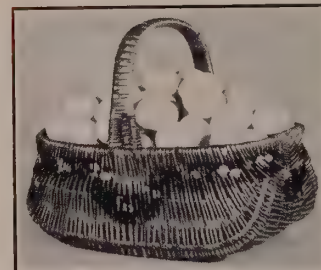

We have made extensive use of high record pedigreed birds in our efforts to produce large eggs which in turn will produce higher profits for egg sales. We have endeavored to keep all birds bred to good size at the same time keeping good egg type by careful culling and mating.

A Pedigreed R.O.P. Sired White Rock Hen. Our Selected AAA White Rock Matings are headed by Pedigreed 220 to 262 Egg Males from the leading R.O.P. Strain in the U. S.

A large type R.O.P. Pedigreed Sired Eagle Nest White Leghorn Hen.

These photos show the finger measurements of a good Egg Producing Hen. The photo at the right shows the four finger measurement between the pelvic bone and the keel. The photo at the left shows the three finger measurement between the pelvic bones. All Eagle Nest Breeding Stock is carefully selected for body capacity as well as all other Egg Producing characteristics.

EAGLE NEST HIGH QUALITY MATINGS

Years of Poultry Breeding Experience Back of Every Mating
Eagle Nest Breeding Stock is Carefully Mated to Produce Improved Chicks

The Birds in each Eagle Nest Mating are carefully selected. As we handle the females, we note each characteristic and then select the males which will maintain or improve these characteristics.

Mating up the Breeders is our job as experienced Poultrymen. Long years of checking the results from a large number of matings have taught us the art of making Matings which produce far better than average. This work can be learned only by experience. It requires a trained "eye" as well as complete knowledge of the Bloodlines in each Mating.

In mating our Birds, we aim to produce offspring which will average high as good, all-around individuals. We particularly stress the following characteristics:

1. **The Highest Type of Vigor and Health.**
2. **Large Body Weight with good rugged bone.**
3. **Uniformity of Body Type.**
4. **Uniformity of Plumage Color.**
5. **Freedom from all standard disqualifications.**
6. **Strong Egg Production characteristics.**
7. **Good Egg Size.**

EAGLE NEST SELECTED "AAA" MATINGS HEADED BY MALES FROM 200 TO 307 PARENT STOCK

We have over 500 Pedigreed and R.O.P. Males in these Matings from the best Trapnest Strains in the U. S. These Males are directly related to official record winners in the Storrs, Georgia, New York, Pennsylvania, Oklahoma and Michigan Egg Laying Contests. They are all bred for Long-Life, High Livability, High Egg Production, Big Egg Size and Big Body Weight. They are bred to highest standards and the Trapnest and Pedigree work is done under State Supervision.

We have years of real effort and genuine quality Breeding into these Matings. In offering chicks from them, we offer our best flock matings and they should produce exceptional flocks of High-Producing Pullets for our customers. They have the kind of Breeding and the Health Quality that counts big.

EAGLE NEST SPECIAL "A" MATINGS

Our Special Matings consist of choice females which have been carefully selected for Large Body Weight, Vigor, Sturdy Bone and good Egg Production characteristics.

These females are carefully mated to Outstanding, Vigorous Males many of which are sons of the Pedigreed or R.O.P. Males from our Selected Matings.

Our Special "A" Matings are much better than average quality throughout and our purpose is to supply our customers with a truly good chick at the lowest possible price.

Back of every Eagle Nest Chick are *fifteen generations or more of this type of selective breeding*. And high standards of breeding improvement through Pedigreed stock from carefully selected Trapnest Strains.

If you could go with us into our matings day after day, while we are selecting and mating the stock which produces your chicks, you would soon see why our experience and conscientious work does bring results.

Our selections and mating of Breeding stock is organized on a practical basis. Our Program is thorough and rigidly followed since 1920, a complete record of every Bird in every mating has been kept. All stock has been Legbanded, and records on the Fertility and Hatchability of each Mating have been checked twice weekly throughout the Breeding season.

Under no circumstances, do we hatch from any mating which is not producing highly Fertile, hatchable eggs. This is one of the many reasons why you obtain Vigorous, Livable Chicks from Eagle Nest Hatchery.

EAGLE NEST EXTRA SPECIAL "AA" MATINGS

Many of the Birds in these matings (both Males and Females) are stock direct from our selected AAA Matings and are 200 to 288 Egg Pedigreed and R.O.P. Sired, or from improvement stock direct from recognized Production Strains. They have 50% or more of the bloodlines of Trapnest Strains which have made high records in National Egg Laying Contests.

In addition to their Trapnest Bloodlines, the Birds in our Special AA Matings have exceptionally good standard quality and Body Type. We have carefully selected the best Males from thousands and each one is an outstanding Vigorous Bird in appearance with well developed breast, broad back and sturdy legs.

You will obtain a flock of very nice, rugged pullets from Eagle Nest AA Chicks and they have the breeding and vigor to give you high Flock Average in Egg Production.

Eagle Nest Leghorns are big in type and big boned, and show by their appearance that they have rugged vigor. They are bred from High Livability Strains which have generations of high family averages in Livability and Egg Production back of them.

EAGLE NEST LARGE TYPE

S.C. White Leghorns

Hannah R.O.P. Strain . . Grandview R.O.P. Strain
Smiley Farms Strain . . . Tom Barron Strain

Dam's Record: 200 to 288 Eggs—Sire's Record: 264 to 307 Eggs

The Leghorn Hens in our AAA Matings are not only carefully selected for all desirable economic characteristics, but they are bred from the best Trapnest Strains in the country. Our AAA Hens are Pedigreed Sired by Males with five or more generations of 240 to 341 Egg Sires.

Eagle Nest White Leghorns are Really Large Type

All of our Breeding females are selected for large lop-combs and heavy body weights averaging more than one-half pound over standard weight. Our Leghorn eggs hatch well and the chicks are very vigorous.

We have improved out matings for years with stock of carefully selected strains. We have paid particular attention to Long Life and High Livability Breeding. Our Hannah Strain R.O.P. Males are from 2 to 6 year old hens with R.O.P. records up to 288 eggs. And they are sired by Males from Dams which laid 240 eggs or more in their first year and 200 to 268 eggs in their second year.

Our original Matings were established with Tancred and Barron Strains, the stock coming direct from those breeders. We have also used considerable stock from the Smiley-Tancred and Grandview Strains.

Eagle Nest White Leghorns are really large type because nothing but large type strains have been used in building up Eagle Nest Breeding Flocks. Eagle Nest White Leghorns carry the blood of pedigreed birds from Tancred Farms,

Tom Barron (England), Smiley Farms, Hannah R.O.P., Hanson and Grandview R.O.P. Strains. The practice, like that of most of our best breeders, of introducing new strains enables us to keep up the vigor, improve the size, body type and egg production.

Direct Bloodlines of Egg Contest Winners

Eagle Nest White Leghorn Chicks for 1936 carry the direct Bloodlines of High Record Egg Laying Contest Hens at Michigan, Texas, Oklahoma, New York, Pennsylvania, Georgia and England.

Our Breeding Program for the improvement of our Leghorn Matings has been very closely followed, and it has brought results. We receive many reports every year from customers who have obtained Egg Production Averages of 200 eggs per hen with very high Livability. For years we have supplied Eagle Nest Leghorn Chicks exclusively to some of the large commercial Egg Farms in the country.

If you want a nice Flock of Big Type Pullets in the Fall—try Eagle Nest Leghorn Chicks. We are very sure you will be pleased with the results of our years of intensive improvement in this great white Egg Producing Breed.

EAGLE NEST LEGHORNS ARE BIG TYPE — RUGGED — BRED FOR

1—HIGH LIVABILITY

Our Pedigreed Sires are from family Bloodlines which have been Progeny Tested for high Livability. That is, careful records have been kept for years on all the Pedigreed chicks of each male and female. The average chick Livability during the brooding period was 98%. The Parent Stock was checked also for high Livability of offspring, during the first year of lay of their daughters. The Strain has been bred continuously for nine generations for high Livability in the laying house.

2—LONG LAYING LIFE

Not only do our Pedigreed R.O.P. Males come from Strains that are bred for long laying life but Eagle Nest Matings have an exceptionally large percentage of old hens which have proven to be good producers for one or more years. In our entire breeding program with White Leghorns, we aim to build up the long laying life factor so that our customers will raise pullets which will lay profitably for two years or more.

3—HIGH EGG PRODUCTION

We keep careful check on all Egg Production on all of our Matings and under no circumstances do we hatch chicks from any mating which has not produced satisfactorily. We select matings which produce 50% or better for the year without forcing. With the breeding back of our stock and our careful selection of breeders according to their own average production, you are assured of very high quality Leghorn Chicks from Eagle Nest Hatchery.

4—LARGE EGG SIZE

In setting our Leghorn Eggs we select only large eggs to produce Eagle Nest Leghorn Chicks. All of these eggs are chalk white in color with good shell texture and shape. They average above 25 ounces per dozen to the tray. By actual weight some of our trays of eggs average above 28 ounces to the dozen. All Breeding Males for nine generations have come from Hens whose eggs averaged 24 ounces or more during their first year of lay.

5—LARGE BODY WEIGHT

The Body Weight of both the male and female in Eagle Nest Leghorn Matings average more than one-half pound above standard weight. We have selected all of our stock for exceptionally good Body Size. Moreover, all of the improvement stock we use is selected from Strains with high average Body Weight. The legs of all our breeding stock are strong and sturdy. This is the surest indication of large bone and vigor. All our Leghorn Breeding stock has deep, long bodies with well sprung ribs and big capacity.

Our Leghorn Bloodlines are directly related to official record winners at the Michigan, Oklahoma and Texas Egg Laying Contests.

All of our Leghorn Hens are carefully selected for big type and ruggedness with large bone, large lop-combs and High Egg Production Characteristics.

RO.P. HANNAH BREEDING CERTIFICATE									
We hereby certify that Earl Little Eagle Nest Hatchery of Grand Rapids, Mich., has purchased 50 R.O.P. 1 week cockerels from W. S. HANNAH & SONS, R.O.P. Leghorn Breeders of Grand Rapids, Michigan. The pedigrees are:

Date Hatched 1934-00000000

Sire No. 193

Dam No. 102

Record Sire's Dam 240

Record Dam 176

Illinois.

Okal

This cockerel has wonderful breeding
His dam is the hen shown on the
attached picture.

The Progressive History of our White Wyandottes is almost identical with the history of the development of this fine Breed. Our original matings were established from the Martin Regal Dorcas Strain which was the best stock then obtainable. Pedigreed birds with trapnest records were used and other pedigreed stock added at various times.

In 1933 we imported some of Tom Barron's best English Strain White Wyandottes to improve the Egg Production. The Females in this importation of Tom Barron stock were placed under Trap-nests along with our regular Trapnested Wyandottes and they finished their year's with records from 206 to 272 eggs.

We have also introduced the bloodlines of the best Pedigreed strain in the U. S. into our White Wyandottes Matings. This stock is exceptionally fine in Body Type and has all of the outstanding Egg Laying Records for Wyandottes in the U. S. Contests.

They are a large, plump bird that under proper conditions mature about as quickly as Leghorns. It has been our experience that in cold climates they lay equally as well as the light breeds since they stand weather changes very well. They are an excellent bird for dressing as they dress off less than most other breeds.

If you want exceptionally fine White Wyandotte Chicks, be sure to try Eagle Nest Chicks in this Breed. All Matings are headed by Males from Trapnest Record Hens with good Wyandotte Body Type and carriage. No inbreeding. Our White Wyandottes are very Vigorous and lay eggs of good size. Our White Wyandotte Matings have unusually good Egg Breeding and have proven themselves as high Flock Producers.

Related to Contest Winners

Eagle Nest White Wyandottes are bred for Egg Production which makes them one of the most necessary dual-purpose breeds because they have a natural quality for meat purposes especially when they are sold as dressed Poultry. Eagle Nest White Wyandottes are directly related to the Egg Contest Winners at Oklahoma, Pennsylvania and other contests. Our stock is bred from the outstanding strain of this variety.

Tom Barron,

White Wyandottes

White Wyandottes as Broilers

Throughout each hatching season we have many standing orders from broiler raisers for White Wyandotte Chicks. The White Wyandotte chicks are very round in body type and the dressed White Wyandotte broiler presents a better appearance than any other breed. Moreover, the White Wyandottes are rapid growers and it is not surprising that so many broiler raisers who cater to the dressed trade prefer White Wyandottes to any other breed. As broilers they are excellent because of their fast growth. White Wyandottes also make fine roasters at five months of age. In fact, there is no other breed that equals them for this purpose. Likewise, the old hens will bring high prices on the market. In Eagle Nest White Wyandottes we supply you from carefully selected vigorous parent stock which is correct in White Wyandotte type, straight breast bones and plump well meated breasts.

Eagle Nest Light Brahmas

The "Lordly" Light Brahmas is still a popular breed. We have several large estates which purchase Light Brahmas chicks from us every year. These estates prefer Light Brahmas because of the very rich dark brown eggs which the Hens lay. The Light Brahma eggs really present a wonderful appearance on the table. The Light Brahmas also are very good meat chickens and grow fairly rapidly. They are well feathered and lay fairly good in the winter. If you prefer Light Brahma chicks we do not believe that you will find any better quality in the country than Eagle Nest Light Brahmas.

Where there is a good demand for large table poultry, the Light Brahmas are seldom surpassed. For many years they were the most popular breed in the South Shore district of Massachusetts where the production of soft roasters for the exclusive trade. As Egg Producers, our Light Brahmas reach fairly good flock averages. The Pullets will come into their lay about 30 days later than Plymouth Rocks. This breed does exceptionally well in close confinement. A three foot high fence is all that is necessary to confine them and they are very gentle and easy to handle. More back lotters should raise Light Brahmas than is now the case.

207 to 254 Egg Dams
226 to 302 Egg Sires

Barred Plymouth Rocks

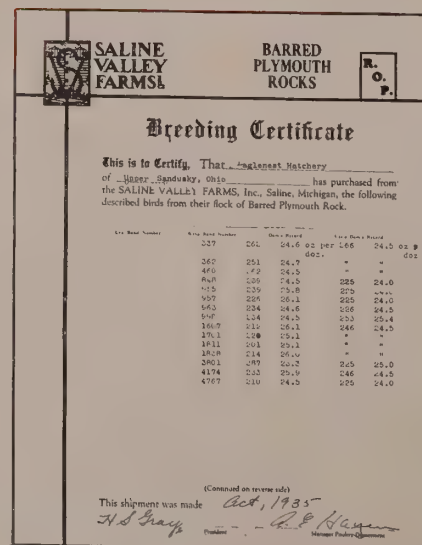

The females in our matings originally came from Official Egg Contest winning stock with records of 248 to 298 eggs. We have carefully selected all our Barred Rocks for years for quick feathering and big Body Weights as well as High Vigor and Egg Production characteristics.

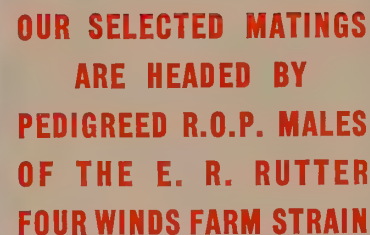

We are experienced Barred Rock Breeders. In the past, we have bred the Business Type Barred Rock paying a great deal of attention to improving our Matings with the finest Egg Producing Bloodlines at the same time, we have developed Eagle Nest Barred Rocks into the kind that make the best profits on the Poultry Farm.

We can supply you with Chicks that carry the bloodlines of both the Saline Valley and Bishop strains, and we can supply you with Chicks which are pleasing our customers all over the United States.

Barred Rock Broiler Chicks

Of course, you know that the Barred Rock Broilers always bring the highest prices on the market. We sell many Barred Rocks exclusively for broiler purposes. In improving our matings, we have always selected Strains with quick feathering characteristics. Our breeding stock is all carefully selected for good vigor and good bone which is the best indication vigorous growth and fast feathering. Barred Rock broilers raised from our chicks, year after year, are fully feathered at eight weeks of age when given proper brooding conditions.

Sire's Records:
240 to 303 Eggs

White Plymouth Rocks

We have put real work and breeding into our White Rock Matings and you will be assured of some of the finest White Rock Chicks in the Field, when you receive Eagle Nest White Rock Day-Olds. All chicks from our Select Matings since 1933 have been Pedigree R.O.P. Sired by Males from 202 to 268 Eggs. The Rutter Strain Bloodlines are widely spread through all of our 1936 White Rock Matings.

White Rock Chicks for Broilers

In addition to their value as broilers our old White Rock Hens bring fancy prices on the market because of their large body weight and good meat quality. Poultry buyers who have been buying market stock for years put in orders for this heavy market poultry Plymouth Rocks, weeks in advance. We are sure that you will be pleased with the well-balanced, dual-purpose qualities in Eagle Nest Plymouth Rocks.

[illegible]

Eagle Nest White Rocks are bred from the outstanding White Rock Bloodlines in the U. S. Our White Rocks are standard in body weight and the young stock feather quickly. Eagle Nest White Rocks are directly related to official record winners at the Connecticut Egg Laying Contest.

"SPIZZERINKTUM" STRAIN**

**1936 "AA" MATINGS
MATED TO UNRELATED
"SPIZZERINKTUM" MALES**

EAGLE NEST

New Hampshire

**FORMERLY
CALLED
NEW
HAMPSHIRE
REDS**

This remarkable Breed (now called New Hampshire instead of New Hampshire Reds) is one of the most prolific producing Breeds for meat and eggs combined.

New Hampshire are an exceptionally rugged bird with big wide feathers which are an indication of strong vitality. They feather very rapidly and they have been bred for generations for fast vigorous growth.

To establish our New Hampshire Matings three years ago, we started 2100 chicks of the Christie "Spizzerinktum" strain direct from New Hampshire. These chicks head a livability for us of 97%. In order to maintain this high vigor, we have introduced males from different pens of the Christie egg record strain to prevent inbreeding. All of our New Hampshire are pure stock.

You will find that Pullets raised from Eagle Nest New Hampshire Chicks will start production about 5½ months of age and they will average better than 5½ pounds per pullet. Shortly after production starts, the pullets will average about 6 pounds per bird. Our Male Birds average about 9 pounds.

We liked the handling qualities of the New Hampshire right from the start. The pullets feel very heavy and solid and they are remarkably uniform in Body Weight and type. We have been very careful about uniformity of color in our New Hampshire, and today the birds in our Matings are a fairly even shade of Red. In this respect we believe we have some of the most uniform plumage colored New Hampshire in the country.

The New Hampshire's were developed in the State of New Hampshire from Rhode Island Reds. They are bred particularly for practical purposes. They feather very rapidly, grow very vigorously and give High Livability as well as good Egg Production in the laying house. We have some of the finest New Hampshire's in the Midwest.

New Hampshire Reds as Broiler Chicks

It is our experience that no breed grows quite so vigorously and reaches broiler weight so early as New Hampshire Reds. We have had New Hampshire chicks in batteries which have averaged over two pounds at eight weeks of age while an entire brood of New Hampshire can be marketed for broilers when they are less than ten weeks old. There has been a great deal of exaggerated publicity on the New Hampshire Reds which we believe does not do the breed any good. None-the-

less, the New Hampshire do have very exceptional qualities in fast feathering and vigorous growth and they do make wonderful broiler chicks. If you have never raised New Hampshire we suggest that you try them out this year on a small scale and decide for yourself. You can depend upon Eagle Nest New Hampshire Chicks. They have the finest pure New Hampshire bloodlines and all of the good qualities for which the New Hampshire are noted.

Dam's Records: 200 to 281 Eggs
Sire's Records: 225 to 279 Eggs

S.C. Rhode Island Reds

There can be no question about the Rhode Island Reds being the best egg producers of the heavy breeds. Eagle Nest Rhode Island Reds have been established for a long period of years and improved regularly with stock of the best Trap-nest Strains. In this Breed, we have introduced Improvement Stock from a strain which has developed one of the Highest Livability Records in the U. S.

Above photo shows an old Rhode Island Red Hen. Eagle Nest Reds not only produce profitably during their Pullet Year, but because of their vigor and high Livability are wonderful second year producers as well.

In Rhode Island Reds we have some exceptional quality to offer you. Our original Matings were established from the Mahood and Harold Tompkins strains and this original stock has been improved every year by careful selective Breeding and Bloodlines from famous contest winners. Moss Farm R.O.P. pedigreed males were also used in our matings.

Our Select Matings for 1936 are headed by males from the Homestead R.O.P. strains. These males have back of them seven consecutive generations of 200 to 343 egg Dams and 205 to 279 egg Sires. They are from five generations of Non-Broody hens.

This stock has the highest nine-year Livability average for all Reds at the Storrs contest and an average Livability of the complete year of 94%.

For high Flock Egg Production with large egg size and good Livability there are no better Bloodlines than those in our matings for this season.

We can assure you of extra large stock with rich red plumage color and reasonably quick feathering. This is in addition to the fine egg production breeding back of their stock. And you will find an extra profit in the extra large egg size of our Rhode Island Reds.

One of the reasons that we have built up such a nice chick business, in Reds is the exceptional uniformity in egg size, color and body weights of our stock. We have always known that there is a natural hardiness in this breed which does make them one of the finest profit makers in the Poultry Field.

We have always selected our stock for good heavy shanks and close feathering. And in the strictly business bred Reds, Eagle Nest Chicks truly offer you genuine quality in both Egg Breeding and meat quality.

Of all breeds, the Rhode Island Reds, in the well-bred Strains have the largest Egg Size and this is a natural characteristic. After production starts the Rhode Island Red pullets will reach the standard egg weight of 24 ounces per dozen about the sixth week. We have checked this figure over carefully with the egg contest managers who supplied us with the averages for the Strains which we use for improvement of our Reds. For instance, at Storrs contest, the average length of time for pullets of all breeds to reach standard egg weight was 10 weeks, while the average for the Homestead Strain was less than 6½ weeks. The average pullet year egg weight for all R.O.P. birds of this Strain averaged 26 ounces per dozen. In all of our settings of Rhode Island Eggs for a long period of years, we have never had any difficulty in obtaining large size eggs. Tray after tray of the Rhode Island Reds of the eggs which we set, average above 25½ ounces per dozen.

[illegible]

Eagle Nest Golden Buff Plymouth Rocks are very uniform in Plummage color. Our Buff Rocks have been carefully selected for years for high egg production, fast feathering, vigorous growth and large bone. We believe that we have some of the best Buff Plymouth Rocks in the U. S. Many breeders and hatcherymen come to us for foundation breeding stock in this breed.

EAGLE NEST

Buff Plymouth Rocks

Eagle Nest Buff Rock Matings were established direct from the Evergreen Bred-to-Lay Strain and we have improved them each year by selective breeding. There are no finer Buff Rock Matings in the country than ours. And we say this advisedly because we have investigated every one of them which we could find. In no case, have we been able to find stock which compared with ours.

Our Buff Rocks are very hardy and are wonderful Flock Egg Producers. Each Breeding Bird, both Males and Females have been selected for a uniform golden Buff color, as well as for Vigor and Egg Production characteristics.

During past seasons, we have had many Breeder-Customers who purchased Buff Rock Chicks from us because they considered that we had the fine quality which they wanted and which they could obtain in no other place.

The reputation of our Buffs has grown gradually to a point where we are supplying more than 75% of our Buff Chicks to be used for Breeding Flock purposes.

If you want Buff Rocks we are sure you will be completely satisfied with the results you obtain from Eagle Nest Chicks in Egg Production, meat quality and uniform Buff color. If you want to improve the breeding of your present flock, we believe you will obtain what you want in Eagle Nest Evergreen Buff Rocks.

Columbian Rocks

EAGLE NEST

Eagle Nest Columbian Plymouth Rocks are carefully selected for standard qualities and true Plymouth Rock Type. The Columbian Rock is a good practical breed

for the general purpose farm or back lots where small flocks are kept. The females lay large, medium-colored, brown eggs and they are very good rustlers. As a flock

they present a beautiful appearance and we know that this is one of the reasons why some of our customers have been purchasing Eagle Nest Columbian Rock Chicks for years.

Columbian Plymouth Rocks are known as a rare variety, but we have developed a well established strain in the Columbians and have a bigger demand for these chicks than we can produce.

Dear Mr. Little:

Pennsylvania
Jan. 7, 1935

I thought I would write you and let you know the success I had with my Eagle Nest chicks. I have raised chicks for 15 or 20 years and ordered chicks from quite a lot of hatcheries, but never got chicks like you send and to prove my statement my neighbor Mr. Rager ordered 500 from you last year and also ordered 100 from another party. He raised nearly all of your chicks and only 6 of the others to five months old. I was over to see his nice flock and he told me that Eagle Nest chicks were good enough for him.

I, also, know a Mr. Muir who got chicks which you sent to Mr. Pender here in town. He was more than pleased with them I asked him last week how they were doing and he told me that they were laying 50%. I was, also, talking to a lady in a feed store here and she told me that out of 200 of your chicks she lost only 3. She, also, ordered 200 elsewhere and told me she was having all kinds of trouble with them.

You sure are getting a good reputation around here for your chicks.

Thanking you for your bulletins and fair and honest treatment, I remain

Yours truly, B. R. H.

White Minorcas

EAGLE NEST

White Minorcas are very similar to the White Leghorns in appearance except that they are much larger. White Minorcas will average to weigh almost as much as Plymouth Rocks, and they lay large white eggs. These two characteristics, Body Weight and Large Egg Size distinguish them as breed.

Many White Minorca breeders claim that they are as good commercial layers as the Leghorns, but this is untrue, in our experience. We have had improvement stock from a good many Strains. However, under practical conditions on general farms

where average attention is given to the poultry flock, the White Minorcas do produce very well as a flock.

Our White Minorcas are established from Helm Strain and we have used this stock for improvement purposes for the past two years, because it has given us the best results. If your favorite breed is White Minorcas, you will be well satisfied with the White Minorca chicks you obtain from Eagle Nest Hatchery. They are all hatched from large chalk white eggs and from parent stock with Big Size, Good Bone and from Large Lop-Comb Females.

If you want a breed which will have an exceptionally large chalk white egg, the White Minorcas will please you. Many of our White Minorca Pullets start their lay with an egg very close to standard weight, and 28 ounce eggs are not unusual in our White Minorca Hens

EAGLE NEST JERSEY GIANTS

The Jersey Giants are the largest of all breeds of poultry. And we have selected all of our breeding birds for very large Body Weight. The chief characteristic of the Jersey Giant is its meat qualities for roasters and

mature birds. They are strictly a meat breed of poultry and they are ideal for this purpose. In Egg Production they lay large dark brown eggs and are fairly good average producers.

We offer you Eagle Nest Jersey Giant chicks in both the White and Black varieties. Our original foundation stock is from the Marcy Strain and we have improved our matings by selective breeding.

The Photos show the Jersey Giant Hens. Both the White and Black Jersey Giants were developed especially for meat purposes and in this respect they are undoubtedly the leading breed in the United States. The fine texture of their meat is not found in any breed of Poultry except the Black Lanshans and the Light Brahmas.

EAGLE NEST QUALITY CHICKS

Eagle Nest Chicks are selected for our customers after they have been hardened off in a specially constructed room where the temperature is kept just right for this purpose. By hardening off our chicks before selection (instead of afterward) we can prevent any imperfect chicks from getting into any shipment to a customer. Each chick is "clean hatched" and is of good solid body weight with bright colored pigment in its beak and legs. In addition to this precaution Eagle Nest Chicks are Hatched from rugged, healthy parent stock which has been legbanded for vigor, trueness to breed, big body weight and egg production characteristics.

In all of this work, our personal attention to detail is the real reason why Eagle Nest Chicks appear so vigorous and strong when our customers receive them. And our business has been developed upon the success of our customers with Eagle Nest High Quality Chicks.

Heavy Assorted or Broiler Chicks

Heavy Assorted or Broilers are No. 1 chicks. Orders for these are accepted to take care of the slight variations in hatches of each breed since that cannot be absolutely determined in advance. In filling orders for these, chicks from all three matings are used, but of course they may be made up of the various heavy breeds that are left after straight orders are filled.

OUR CUSTOMERS ARE OUR BEST ADVERTISEMENTS

November, 1935

Dear Sirs: Please book an order for Mr. Ralph Gordon for 500 of the Extra Select Mating Baby Chicks.

We have around 150 hens now and they average around six dozen a day now and they are moulting. We have sold 1100 dozen eggs since April 1st. Everyone around here has White Leghorns and we have the Reds; we get eggs and they don't. Of course they wonder why we get eggs and they don't. We have tried to get them to buy their chicks from you as we believe that is the reason we are having such good success.

Please send us a price list and catalog as soon as you start hatching baby chicks. You need not worry about us as we shall order chicks as long as we are in the poultry business and you are in the business. We think we get just what we order and pay for, and you are always prompt. Last year we ordered 300 and we raised 250 of them. This year, we are going to try to do better.

Very truly yours, Mr. and Mrs. R. G.

Eagle Nest Hatchery Pa., Nov. 13, 1935

Dear Sirs: I have been wanting to write a few lines in regard to the fine bunch of chicks I got from you last Spring. I am well pleased with them, and they are doing fine. I have around two hundred hens and I am getting from 70 to 80 eggs a day. I got the chicks the 25th of April and got my first eggs about the 12th of September.

I sold the roosters in August; they averaged about 3½ to 4 lbs. and I got enough to pay for the chicks. I want to get about 300 chicks this Spring and you can look for my order about April.

Yours truly, A. C. M.

Eagle Nest Hatchery N. Y., Sept. 2, 1935
Upper Sandusky, Ohio

Gentlemen: I have now what I consider the most likely looking flock of pullets I have raised in some time. Very uniform in color and weight—hardy and smart. Production started Aug. 10th slowly, as I am not hurrying them. Yesterday, I picked up eggs weighing better than 2 ounces. I am very much pleased with them, and wish to take this opportunity of thanking you for your fair and prompt method of doing business. It has been a pleasure to have done business with you.

What are the prospects for next year?

Thanking you again for your kind consideration, I am,
Yours truly, P. E. L.

Dear Mr. Little: My mother and I ordered some baby chicks from your company when I lived in Georgia in 1925. They were real baby chicks, and a stock or strain that makes the quality that goes with good baby chicks. When we received them down in Georgia, they were all alive, and believe me we surely did have very good luck with them. It must be that you pick the very best of your baby chicks before sending them out to your customers.

During that time I was in high school; now I have gone to college. I have a pretty good job here in Washington, D. C. I know no better way to use my money than get some baby chicks, and start off in the chicken business for my own.

Mr. Little, if you have any literature on how to care for baby chicks, and also grown ones, will you please send some along?

Hoping to receive whatever literature you have, I remain
Sincerely yours, J. B.

Ohio, Jan. 29, 1935

Dear Sirs: Want to tell you about the chicks you sent last year. They certainly did fine; only lost 17 of 18 out of the 130 and the pullets are laying and have been for more than a month. All together I have about 80 pullets and am averaging 39 eggs for the month, so far. I got 46 one day just before the zero weather came. Some of our neighbors that dress poultry for market said I had some of the nicest pullets they ever saw.

Yours truly, H. B.

December 9, 1935

Dear Sirs: We feel we must write you a few words about our New Hampshire Red chicks we have raised this year.

On April 22nd we bought 250 New Hampshire chicks and lost but 12. On June 10th we bought 500 more with about the same mortality.

The first cockerels we sold were 4 months and 18 days old and averaged 5 lbs. The second bunch of cockerels sold were 5 months old and averaged 6 lbs.

We now have 300 choice pullets, the first started to lay at the age of 5 months and have been steadily increasing since. In the month of November we sold 97 dozen eggs. They are all strong, healthy hens, uniform in color and size.

You can include us as one of your satisfied customers.
Mr. and Mrs. U. C. R.

Ohio, Nov. 2, 1935

Dear Sirs: Please send me the prices of New Hampshire chicks.

I want about 200 some time about the first of January. Those Leghorn chicks I bought of you last April I only lost 20 out of 500.

The bulletin you sent out is okay. While I have had quite a lot of experience in poultry I am always trying to learn something more.

Yours truly, W. S.

Eagle Nest Hatchery
Upper Sandusky, Ohio

Pa., Oct. 23, 1935

Dear Sirs: Having received Eagle Nest Hatchery News I am about to say that the information that you supply to your customers is to be appreciated for I think it is about as good as any advice that I have read, and I do surely thank you, gentlemen, a whole lot. I may say to anybody that is interested in chickens that I have received the finest lot of baby chicks that can be had or bought from any hatchery.

I received my baby chicks on April 26th and they were five months old on Sept. 26th to the very day, when the first four pullets laid their first eggs and up to date I am getting out of 80 pullets about 23 to 30 eggs each day, and gentlemen, I mean to say that I have five prize winning cockerels out of the 100 chicks that I bought from Eagle Nest Hatchery, and they will surely get my order for all that I can buy.

I expect that you will receive a good many more orders from this neighborhood, and any place that I go I surely will advertise Eagle Nest Hatchery for baby chicks.

Thanking you for Eagle Nest Hatchery News, I am your customer

L. A. S.

Eagle Nest Hatchery
Upper Sandusky, Ohio

N. Y., Nov. 7, 1935

Dear Sirs: Am writing in regard to chicks received May 10th. On this date received 200 White Leghorns and 100 White Rocks. Have not lost a one since May 25th.

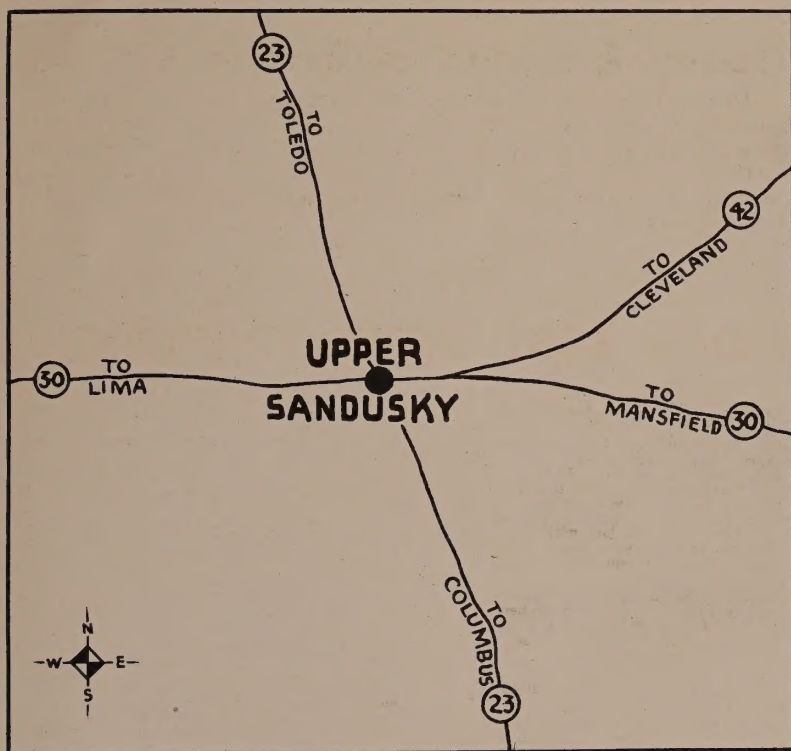

Of the White Leghorns I have 98 of the best looking pullets I ever owned. I put them in laying house Oct. 15th to 20th. We got our first egg from these pullets Sept. 25th but owing to the grape harvest could not get them housed any earlier. Have received as high as 36 eggs to date, which I consider very good for only being housed two weeks.

We disposed of cockerels at 10 weeks of age. I am very well pleased with my chicks and Eagle Nest will get my next order.

Yours truly, H. E. R.

EAGLE NEST Has Ideal Shipping Facilities to All Parts of the U. S.

The map below shows the location of Eagle Nest Hatchery, a trifle north and west of the exact center of Ohio. We have 4 fast trains per day. Upper Sandusky is located on the main railroad lines between New York and Chicago. We also have ideal transportation facilities in all directions, so that chicks reach their destination within a few hours. Many shipments are put directly on the train at midnight and the chicks are in our customers brooder houses early the next forenoon. Chicks shipped to New England and the south reach their destination late the first afternoon or following morning.

How to Order

In ordering Eagle Nest Baby Chicks it is only necessary to send a deposit of \$1.00 per 100 chicks to book your order in advance. The balance to be paid ten days before shipment is made. On all orders which are to be shipped immediately be sure to enclose payment in full with the order. All money orders and drafts should be made payable to Eagle Nest Hatchery, Upper Sandusky, Ohio.

Dear Sir: I bought 600 White Leghorn chicks this summer from you, and was well satisfied with them. They are doing fine.

I have installed a 100-a-week broiler plant and would like to know if you would have any chicks for sale this winter, or part of the winter—White Rocks, New Hampshire Reds for broiler purposes

Yours truly, E. J.

Eagle Nest Hatchery

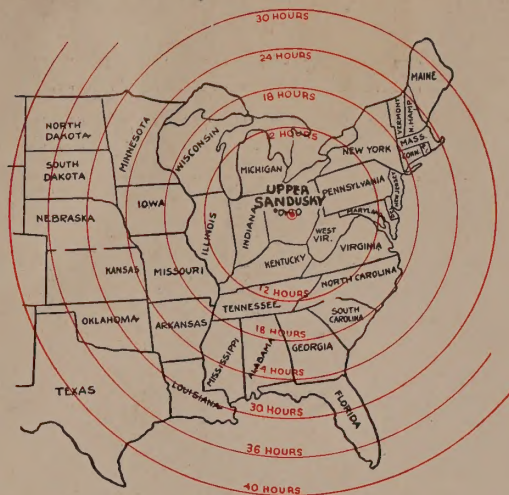

Dear Sir: Received your hatchery news, and find it very interesting. I have 225 pullets which I raised from your baby chicks. I am getting twelve and fifteen eggs a day at present. They have very good body weight. I am very much satisfied with the chickens, only lost 23 out of 500.

Poultry business is new for me and I would be more than glad to get any good suggestions that you could give me on poultry raising.

Sincerely yours, G. C. C.

Eagle Nest Invites You

The town of Upper Sandusky is located not very far from the center of Ohio. It is reached from the east and west by the Lincoln Highway—U. S., 30 N. It is reached from the north and south by Route U. S. 23 which is the direct highway between Toledo and Columbus. When you reach Upper Sandusky turn to the south side of town at the first stop light. Eagle Nest Hatchery is located on the edge of the town on a paved street. We invite you to visit us at any time during the year.

For those who call for the chicks at the Hatchery please telephone us or write us in advance. Our telephone number is 263W.

Method of Shipment

Eagle Nest Chicks are shipped by Parcel Post or express prepaid. Please state which way you want chicks shipped.

Order as Far in Advance as Possible

Whenever possible be sure to send your order in advance so that we can guarantee shipment on the exact date you specified.

A Final Word

It Will Be a pleasure for us to fill your baby chick order. You can depend on us to fill it to your complete satisfaction. Regardless of what Eagle Nest Breed you buy the chicks you get will be full of health, life and vitality. And when they mature they will be the kind of prolific producers that are necessary to make the bigger profits.

Working with a limited number of the best and most popular varieties of poultry we have continuously bred to improve egg laying, increase strength and vigor and produce larger sized birds which would lay the bigger eggs. Our 52 years' experience with poultry gives us a knowledge of what good poultry should be and we give you the full benefit of this knowledge in Eagle Nest Chicks.
